EXPERIENCE

Third Eye Creative | Fullstack Developer Intern

Dec 2025 – Present

- **Architected** a freecycling marketplace (Passiton) for **10,000+ users** on GCP Cloud Run, validating system integrity through rigorous QA testing lifecycles.
- **Programmed** a **Vertex AI** retry loop that reduced API failures from **33% to 3%**, alongside a Redis feed algorithm that slashed load latency from **10s to <2s**, and an OSM mapping integration to eliminate API costs.
- **Designed** the end-to-end **system architecture** for **bluedot.ngo**, a centralized portal facilitating enterprise-level NGO donation management and large-scale charity campaigns.
- Accelerated PostgreSQL performance by executing a **zero-downtime cleanup** of **489 "poison pill"** rows (shrinking DB from **2GB to 800MB**) and deploying targeted indices to speed up complex join queries by **40%**.
- Formulated a **multi-tenant CI/CD** deployment pipeline using GitHub Actions and Docker Hub, automating lifecycles for **3 Play Store apps** and reducing build-to-delivery times from **hours to minutes**.
- Cut infrastructure expenditures by **46%** for a legacy cash-collection tool by migrating **AWS EC2** instances to **optimize DigitalOcean droplets** and containerizing the stack with Docker.
- Implemented a **modular Role-Based Access Control (RBAC)** system and strict data-masking protocols for a government portal (NDB), securing a comprehensive pre-launch QA testing.

EarthlyExotica | Fullstack Developer Intern

Jan 2025 – May 2025

- **Engineered** the mobile-responsive Flutter architecture for **baadige.com**, utilizing modular component design to accelerate frontend development lifecycles.
- Integrated core **REST APIs** and leveraged **AI productivity frameworks** to streamline debugging protocols and synchronize platform functionalities.

Suven Consultant and Technology Pvt. Ltd. | Machine Learning Intern

Oct 2023 – Dec 2023

- Built high-accuracy Machine Learning models using Python and NumPy, deploying robust data preprocessing pipelines for real-world web-based analytics solutions.

PERSONAL PROJECTS

Smart Attendance System | Lead Developer

- Engineered a real-time facial recognition pipeline via Python (OpenCV, NumPy) and CCTV feeds, replacing manual logging with automated CSV-backed tracking.

Real-Time Sign Language Translation System | ML Developer

- Optimized an ML preprocessing pipeline via robust data augmentation and cleaning, significantly improving model generalization and sign-to-text gesture-recognition accuracy.

Weather Alert & SMS Notification System | Python Developer

- Developed an automated SMS notification engine combining the OpenWeatherMap API and Twilio API to fetch real-time meteorological conditions and instantly broadcast localized rainfall alerts.

SKILLS

- **Languages:** Python, Dart, Kotlin, Java, JavaScript, TypeScript, SQL, HTML, CSS.
- **Cloud & Infra:** GCP (Cloud Run, Vertex AI, IAM), DigitalOcean, AWS (EC2), Linux, Docker, Jenkins, Vercel, Bunny CDN.
- **Databases:** PostgreSQL, Redis, MySQL, MongoDB, Neo4j, Firebase, Supabase.
- **Tools & ML:** Git, VS Code, Android Studio, Xcode, PyCharm, Postman, SonarQube, k6, Grafana, OpenCV, NumPy.
- **Concepts:** Data Structures & Algorithms, Object-Oriented Programming, Artificial Intelligence & Machine Learning, Prompt Engineering.

EDUCATION & CERTIFICATIONS

Visvesvaraya Technological University | B.E. in Computer Science & Engineering

Dec 2021 – June 2025

Certifications: Oracle Cloud Infrastructure 2025 Certified Generative AI Professional;
Oracle OCI AI Foundation Associate; Java Object-Oriented Programming (LinkedIn Learning).
